

LIVE INFORMATION SYSTEM

Special live video information solution is prepared for Lithuania and Latvia parliaments. Live titling system is connected to the parliament control computer and goes on air automatically with speaker's name, voting results, debated law titles and etc. Titles are overlaid on the parliaments studio video output signal.

For the text information you can choose any TRUE TYPE font of any size, color and with different attributes. Graphic pictures and animated video can also be used. Software allows to go on air not only by cut effect but it also provides transition effects like wipes, blinds, mosaic.... Crawling and rolling at different speeds are provided as well. Required info is taken either from a simple text file or from database. Graphic view of the templates must be prepared with TEXTUS EDITOR software. Analog and digital clocks

are also available. The system can operate as a source for video switcher (DSK FILL, DSK KEY output signals) or as a titles inserter into video signal. BYPASS function when computer is turned off is available as well. External mixer fader provides manual control of the title mixing level, speed and BYPASS function.
