

VELODROME INFORMATION SYSTEM ON VIDEO

New bicycle track has been opened in Panevėžys sports arena lately. But it doesn't have any special information table, used only for bicycle competitions, which table is not flexible and in most of the arena's events can not be used. No doubt, this is not economic. We have designed a system, providing all bicycle information on the arena's video cube. The system includes special software and computer with graphic board.

All of the info is taken from bicycle time measure system (e.g. TimeTronics) by RS232 interface in real time. With TEXTUS EDITOR graphics templates can be prepared for unlimited amount of

tables. Any TRUE TYPE font of any size, any color, different symbol attributes can be used for the text information, e.g. first name, last name, round number, time, place and etc. Graphic picture can also be included.
